Quiz 2

1.Cloud Services: Provides the backend services like storage, and others things

Execution Services: Provides abilty to execute our application

Development Tools: Provides tools for developing the applicatoins

2.Synchronous system is heavily dependent on the time since in has to do the task as a whole.

While Asynchronous system doesnot really relies on the time. The task can be done independently.

Like in ajax the server just call whenver there is need of the data and not the whole page itself

3.Serverless computing is the facility given to the customers by which they can deploy their applicaions without actually worrying about the backend / server side.

This help in reducing the work in half and reduces the maintainence cost.
